

PWS Information

Purpose of this worksheet: For water systems to document basic system information.

Facility Information

Water System Name:

BEAUFORT CO SOUTHSIDE

PWSID: Please enter using the format "NC0011222"

NC0407040

Population Served (number of people):

9,369

Number of Service Connections:

4,767

PWS Type (select one):

Community Water System

If you are a CWS, do multi-family residences comprise at least 20% of the structures you serve?

No

Mailing Address

Street or P.O. Box:

111 W SECOND STREET

City or Town:

WASHINGTON

State, Zip Code:

NC 27889

System Contact Person

Name:

ERICK JENNINGS

Telephone:

252-975-0720

Title:

WATER SYSTEM MANAGER

Inventory Methodology

PWS Name: BEAUFORT CO SOUTHSIDE

PWSID: NC0407040

Enter Date Last Updated:

10/04/24

Purpose of this worksheet: For water systems to document the methods and resources they used to develop and update their inventory.

Part 1: Historical Records Review

Describe the Records Reviewed for Your Inventory and Indicate Your Level of Confidence (e.g. , Low, Medium, or High). Historical records are required to be part of your service line inventory. If you do not have the record described, please indicate this.

1. Previous Materials Evaluation

Example: Locations of Tier 1 lead tap sampling locations that are served by a lead service line.

NO RECORDS AVAILABLE.

2. Construction Records and Plumbing Codes

Examples: Local ordinance adopting an international plumbing code. Permits for replacing lead service lines.

RESOLUTION TO CREATE WATER DISTRICTS VI (1992) AND VII (1991) (HIGH). CONSTRUCTION CONTRACT FROM SYSTEM INSTALLMENT (1995) (HIGH).

3. Water System Records

Examples: Capital improvement plans. Standard operating procedures. Engineering standards.

MINIMUM CONTRACT REQUIREMENTS FOR PRIVATELY FINANCED AND CONSTRUCTED WATERLINE EXTENSIONS (HIGH).

4. Distribution System Inspections and Records

Examples: Distribution system maps. Tap cards. Service line repair/replacement records. Inspection records. Meter installation records.

AS-BUILTS FOR DISTRIBUTION SYSTEM (HIGH). MAP OF DISTRIBUTION SYSTEM (HIGH).

5. Additional Records Required by Your State

NO RECORDS AVAILABLE.

6. Other Records

NO RECORDS AVAILABLE.

Part 2: Identifying Service Line Material During Normal Operations

1. During which normal operating activities are you collecting information on service line material? Select yes or no for all.

Water meter reading

No

Water meter repair or replacement

No

Service line repair or replacement

No
Water main repair or replacement
No
Backflow prevention device inspection
No
Other
No
If "Other", please explain:
2. Did you develop or revise standard operating procedures to collect service line material information during normal operation?
No
If "Yes", please describe:

Part 3: Service Line Investigations
1. Identify the service line investigation methods your system used to prepare the inventory (select yes or no for all). If a water system chooses an investigation method not specified by the state under 40 CFR §141.84(a)(3)(iv), state approval is required. <i>Note that investigations are not required by the LCRR but can be used by systems to assess accuracy of historical records and gather information when service line material is unknown.</i>
Visual Inspection at the Meter Pit
No
Customer Self-Identification
No
CCTV Inspection at Curb Box - External
No
CCTV Inspection at Curb Box - Internal
No
Water Quality Sampling - Targeted
No
Water Quality Sampling - Flushed
No
Water Quality sampling - Sequential
No
Water Quality Sampling - Other
No
Mechanical Excavation
No
Vacuum Excavation
No
Predictive Modeling
No
Other
No
If "Other", please explain:
2. If "Predictive Modeling", please briefly describe the model and inputs used:
3. How did you prioritize locations for service line materials investigations? For example, did you consider environmental justice and/or sensitive populations, did you use predictive modeling, and/or did you target areas with high number of unknowns?

Inventory Summary

PWS Name: BEAUFORT CO SOUTHSIDE

PWSID: NC0407040

Enter Date Last Updated:

10/04/24

Purpose of this worksheet: For water systems to provide a summary of their service line inventory, including information on ownership and the number of service lines for each of the four required materials classifications.

Part 1. General Information

1. Is this the **Initial Inventory** or an **Inventory Update**?

Initial Inventory

2a. Who **owns the service lines** in your system? *If other, please explain below.*

Split ownership between the system and the customer

2b. Is there documentation that defines service line ownership in your system, such as a local ordinance? *If yes, please describe below and explain where ownership is split (e.g., property line, curb stop).*

Yes

BEAUFORT COUNTY WATER SYSTEM RULES AND REGULATIONS. CUSTOMERS OWN LINE FROM THE METER BOX TO THE HOMES.

3a. Describe when lead service lines were generally installed in your system.

3b. When were lead service lines banned in your system? Reference the state or local ordinance that banned the use of lead in your system.

1987, STATE LEAD BAN.

4. Do you have lead goosenecks, pigtails or connectors in your system?

No

5. What is your overall level of confidence in the inventory (*i.e.*, "Low", "Medium", or "High.") Please explain your rationale below.

High

ENTIRE SYSTEM WAS ESTABLISHED AFTER THE LEAD-BAN.

Part 2. Inventory Summary Table ¹

*The classifications generated in the Column "Entire Service Line Material Classification" (Column X) from the **Detailed Inventory** will be used to calculate the total number of service lines for each of the four material classifications below.*

Lead: Any portion of the service line is known to be made of lead.²

0

Galvanized Requiring Replacement (GRR): The service line is not made of lead, but a portion is galvanized and the system is unable to demonstrate that the galvanized line was never downstream of a lead service line.

0

Non-Lead:

4,767

Lead Status Unknown: The service line material is not known to be lead or GRR. For the entire service line or a portion of it (in cases of split ownership), there is not enough evidence to support material classification.

0	
TOTAL	
4,767	
Notes ¹ This summary table is for reporting material for the entire service line connecting the water main to the customer's plumbing. See the Classifying SLs worksheet for additional guidance on assigning a materials classification to the entire service line when ownership is split. Remember that systems must track the system-owned and customer-owned portions separately in their inventory. ² A lead-lined galvanized service line is consistent with the definition of an LSL under the LCRR ("a portion of pipe that is made of lead, which connects the water main to the building inlet") (40 CFR §141.2) and must therefore be classified in the inventory as an LSL. Do NOT, however, count non-lead service lines with a lead gooseneck or pigtail as lead service lines unless required by your state.	

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned

Detailed Inventory							Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column calculation to determine if the customer-owned				
PWS Name: BEAUFORT CO SOUTHSIDE											
PWSID: NCD407040											
Date Last Updated:											
10/4/2024											
Purpose of this worksheet: To allow water systems to track materials for each service line in their distribution system.

Public Accessibility Documentation

PWS Name: BEAUFORT CO SOUTHSIDE

PWSID: NC0407040

Enter Date Last Updated:

10/04/24

Purpose of this worksheet: For systems to provide documentation to the state on how they met the public accessibility requirements of the LCRR.

1. Select the location identifiers that you use for your service line inventory. Select all that apply.

Address

Yes

Street

No

Block

No

Intersection

No

Landmark

No

GPS Coordinates

No

Other

No

If "Other", please describe:

2. Does **every service line** have a location identifier?

Yes

If "No", explain. Remember that location identifiers are required for service lines that are lead and galvanized requiring replacement.

3. How are you making your inventory publicly accessible? Check all that apply. Remember that if your system serves > 50,000 people, you **must** provide the inventory online.
